

GT-CLIPS

Gifted-Talented Creative Learning Immersion Program Series

CLIPS is an active enrichment program addressing the study and acquisition of higher level independent thinking skills. These are often missed in many public and private school curricula due to the lack of time or opportunity for them within the school day. GT-CLIPS any time, any where program is the answer you are looking for!

Part A addresses accelerated and advanced methods to transfer the knowledge and skill of

1. Foreign Language Acquisition
2. General Studies in ANY discipline

Advanced studies are needed for the Global World Community our children will experience. Utilizing conversation and active project planning, each student will experience a total immersion of world wide, topic based critical issues.

Conversational immersion in the chosen Foreign Language, doing and speaking from the first day, has proven highly successful in Language Acquisition for the State Dept and many University Programs. Examples of activities include fun games, songs, and role playing scenes from home, school, shopping, cultural communities, travel, personal health and medical services, money, finance, per capita income, job markets, restaurants, theatre and more. In other words, the student will experience and participate in the same cultural activities typical of the current English/American lifestyle but through the newly chosen international world of specific foreign language study.

SELECT THE PROGRAM OF CHOICE.

1. Decide how many direct, teacher led instructional hours you want.
2. ADD 2 additional hours of monitored time (i.e. independent skill development through research and project activity) PER Hour of direct instructor led sessions
 - *Instructor led, LIVE RealTime is \$60.00 per hour
 - *Monitored work/project time is \$25.00 per hour

Projects and research will be age appropriate, individualized, and developed by parent, student and instructor. A sample of ideas include the following: creative Arts and Sciences will be available for the students to choose from and work with through group development and independent product based activities. A few examples are:

- *Story Development
- *Shadow Puppetry
- *Puppet and/or Play dialogue writing
- *Computer Animation projects
- *Science and Engineering Development of models through symmetry and power movements that parallel the Robotics course for college age. These often involve the use of Lego and assimilation projects for construction of geometric designs with metric measurement components.
- *Jigsaw and multiple manipulations of 3-D or
- *5,000 piece puzzle assemblies in a timed environment for another high level challenge with groups competing in organization and completion of a timed construction, attempting to improve the base line of proficiency. This is for developing the right brain skills involving color, shape and pattern reversals.
